

Introduction to Vertical Alignment Charts

The mathematics vertical alignment charts are provided as a resource for teachers across the state of Georgia. The charts have been designed to highlight the big ideas of the Georgia Performance Standards and to show how the mathematics content has been arranged across grade bands. The pages can be printed and viewed as a horizontal ladder to see the progression of mathematics concepts throughout K-12. The vertical alignment charts are not intended to be used as a checklist of topics to be covered.
