### Compare and Contrast

When we **compare** two different things, we look for similarities. When we **contrast** two different things, we look for ways that they are different.

Example: A monkey usually walks on two legs. A cat walks on four legs. A monkey swings from trees, but a cat climbs them without swinging. But, a cat and a monkey both have fur and they are both mammals.

Practice: Compare and contrast each pair of items. Write down two ways they are similar and two ways they are different.

1. Book and magazine
