

$$4y - z = 4$$

Multiply both sides by 4

$$4(4y - z) = 4(4)$$

Distributive property

$$16y - 4z = 16$$

(Adding)

$$\begin{array}{r} 16y - 4z = 16 \\ + \quad -3y + 4z = 36 \\ \hline 13y + 0z = 52 \end{array}$$

or

$$13y = 52$$
