

# Human Skeleton Worksheet

Name \_\_\_\_\_ Date \_\_\_\_\_

The body is made up of many bones called the skeleton. Bones are mainly made up of calcium. The skeleton protects the soft inner parts of the body. Muscles pull on parts of the skeleton to make the body move. A joint is where two bones meet. Some joints allow parts of the skeleton to bend. The skeleton provides the body with support and gives it its shape.

- A. The bone protects the brain.
- B. These bones protect the lungs.
- C. This bone protects the heart.
- D. This joint allows the leg to bend.

**Activity**  
Draw around your hand. Feel your bones and see if you can draw a map of the bones on your hand.
