

Quadrilaterals Graphic Organizer

5.3 Kite and Trapezoid Properties, 5.5 Properties of Parallelograms, 5.6 Properties of Special Quads

Quadrilateral Name	Side Properties	Angle Properties	Diagonals Properties
Kite A quadrilateral with two distinct pairs of congruent consecutive sides.	<ul style="list-style-type: none"> In a kite there are two pair of congruent sides 	<ul style="list-style-type: none"> Non-vertex angles are congruent. Vertex angles are bisected by a diagonal. 	<ul style="list-style-type: none"> Diagonals are \perp. Diagonal connecting vertex angles is the \perp bisector of the other diagonal.
Trapezoid A quadrilateral with exactly one pair of parallel sides.	<ul style="list-style-type: none"> The two parallel sides of the trapezoid are called the bases. 	<ul style="list-style-type: none"> The consecutive angles between the bases of the trapezoid are supplementary. 	
Isosceles Trapezoid A trapezoid with two congruent legs.	<ul style="list-style-type: none"> In an isosceles trapezoid the non-parallel sides are congruent. 	<ul style="list-style-type: none"> The bases angles of an isosceles trapezoid are congruent. 	<ul style="list-style-type: none"> The diagonals of an isosceles trapezoid are congruent.
Parallelogram A quadrilateral with two pairs of parallel sides.	<ul style="list-style-type: none"> Opposite sides are congruent. 	<ul style="list-style-type: none"> Opposite angles are congruent. Consecutive angles are supplementary. 	<ul style="list-style-type: none"> The diagonals bisect each other.
Rhombus An equilateral parallelogram.	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite sides are congruent. 	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite angles are congruent. Consecutive angles are supplementary. 	<ul style="list-style-type: none"> All of the same properties of a parallelogram and... The diagonals of a rhombus are \perp bisectors of one another. The diagonals of a rhombus are angle bisectors.
Rectangles An equiangular parallelogram.	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite sides are congruent. 	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite angles are congruent. Consecutive angles are supplementary. 	<ul style="list-style-type: none"> All the same properties of a parallelogram and... The diagonals of a rectangle are congruent. The diagonals of a rectangle bisect one another.
Squares An equiangular and equilateral parallelogram. A regular quadrilateral.	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite sides are congruent. 	<ul style="list-style-type: none"> All of the same properties of a parallelogram. Opposite angles are congruent. Consecutive angles are supplementary. 	<ul style="list-style-type: none"> All of the same properties of a parallelogram and... The diagonals of a square are congruent, \perp, bisect one another.
