

(Day #2)

It's asking 12, round 1000

It's asking 2, round 1000

Problem:

The veterinarian rounds the weight of your dog to the nearest hundreds position to determine the number of pills the animal should take to keep from contracting heartworm. Brad's dog weighs 125 pounds.

- A.** Which digit in the number 125 should the veterinarian underline to round to the nearest hundreds position?
- B.** Will the veterinarian give Brad's dog enough pills for a 100-pound animal or a 200-pound animal?
