

## **Intensive Farming Vs Organic Farming – The debate!**

**TASK:** Imagine this.....

A farm is up for sale in your neighbourhood and there are two bidders for it:

1. Mr Giles wants to create an intensive farm to grow carrots and potatoes on the land, and use the old buildings to keep battery hens, for their eggs.
2. Mr McDonald wants to use the land to create an organic farm to produce corn and breed pigs, for their meat.

Research both types of farming and their impact on:

- Local area – research the types of farms already around, and what your area might need.
- People – benefits of intensive farming, disease, production and cost, ethical issues etc.
- Environment – wildlife in the area, populations, nutrients in soil, water supplies.

Write a speech or give a powerpoint presentation, (10mins in length) that you will deliver to the council with all the information on both types of farming and your views on this matter stating why one is more suitable than the other.
