

## Percent Composition and Molecular Formula Worksheet

1. What's the empirical formula of a molecule consisting 55.7% carbon, 5.7% hydrogen, and 38.6% oxygen?
2. If the molar mass of the compound is 108.1 g/mol, what's the molecular formula?
3. What's the empirical formula of a molecule consisting 55.7% carbon, 5.7% hydrogen, and 38.6% oxygen?
4. If the molar mass of the compound is 108.1 g/mol, what's the molecular formula?

Write the molecular formula of the following compounds:

5. A compound with an empirical formula of  $C_2H_4O$  and a molar mass of 88 g/mol.
6. A compound with an empirical formula of  $C_2H_4O$  and a molar mass of 176 g/mol.
7. A compound with an empirical formula of  $C_2H_4O$  and a molar mass of 176.2 g/mol.
8. A compound with an empirical formula of  $C_2H_4O$  and a molar mass of 88 g/mol.

Answer the following questions:

9. The percentage composition of a white solid is found to be 50.7% C, 4.7% H, and 44.6% O. Determine the empirical formula of the white solid.
10. The molar mass of a general  $CH_2O$  was determined by experiment to be 60.0 g/mol. What is the molecular formula?
11. A white solid is found to contain 60.0% carbon, 4.4% hydrogen, and 35.6% oxygen. Combustion of such compounds yields  $CO_2$ ,  $H_2O$ , and  $N_2$  as products. If the combustion of 0.71 g of white yields 0.51 g  $CO_2$  and 0.14 g  $H_2O$ , what is its empirical formula?
12. The molar mass of a white solid is 60 g/mol. What is its molecular formula?
13. Calculate the mass percent of carbon, hydrogen, and oxygen in acetic acid,  $C_2H_4O_2$ .
14. 0.1612 g sample of a compound made from glucose and ribitol is decomposed. Analysis of the products shows that 0.110 g of glucose was produced. What is the empirical formula of the compound?
15. When 1.0000 g of an oxide of nitrogen ( $NO_x$ ) is decomposed into the elements by heating, 0.400 g of nitrogen are produced. What is the empirical formula?
16. The compound contains the following percent composition. What is the empirical formula?  
 $C = 50.0\% \quad H = 4.4\% \quad O = 45.6\% \quad N = 9.0\% \quad S = 0.0\%$
17. A compound of general molar mass has an approximate molar mass of 100 g/mol. If the percent composition is as follows, what is the empirical and molecular formula of water?  
 $C = 54.0\% \quad H = 9.0\% \quad O = 37.0\% \quad N = 0.0\% \quad S = 0.0\%$
