

Pterodactyl

The Pterodactyl was a large flying reptile. It did not have feathers, but rather horny scales. The wings were thin membranes, similar to the wings of a bat. The wing span of the Pterodactyl measured more than 20 feet.

Dinosaur Bones

Triceratops

The Triceratops was a plant-eater that had to protect itself from many enemies. It had a large, bony plate that covered the back of its neck and three long horns, one over each eye and another on its nose.
