

Name _____ Date _____

CELL ORGANELLES

Practice Worksheet

Complete the following table by writing the name of the cell part or organelle in the right hand column that matches the structure/function in the left hand column. A cell part may be used more than once.

Structure Function	Cell Parts
Packages proteins for transport out of the cell	
Firm, protective structure that gives the cell its shape in plants, fungi, most bacteria and some protists	
Organelle that manages or controls all the cell functions in a eukaryotic cell	
The region inside the cell except for the nucleus	
Small bumps located on portions of the endoplasmic reticulum	
Closely stacked, flattened sacs (plants only)	
Transports materials within the cell	
Produces a usable form of energy for the cell or bacteria	
Provides temporary storage of food, enzymes and waste products	
Contains chlorophyll, a green pigment that traps energy from sunlight and gives plants their green color	
The sites of protein synthesis	
Stores material within the cell
