

Chapter 7-3 Cell
 Boundaries.....Name _____

1. Name two functions of the cell membrane:

2. The cell membrane contains _____ molecules that are embedded in the lipid bilayer.

3. Why do scientists call the membrane a "mosaic"?

4. On the image, label the
 a. lipid bilayer
 b. protein channel
 c. carbohydrate chains

5. What three types of organisms have cell walls? _____

6. What is the main function of the cell wall?

7. What are plant cell walls composed of? _____

8. One of the most important functions of the cell membrane is to _____ the movement of dissolved _____ from the liquid on one side of the membrane to the liquid on the other.

9. A solution is a _____ of two or more substances.

10. Define diffusion:

11. When the particles are the same throughout, the system has reached _____

12. Diffusion depends on _____ particle movements, therefore it [does | does not] (circle) require energy.

OSMOSIS

13. If a substance is able to diffuse across a membrane, the membrane is said to be _____

14. Define osmosis:

15. Isotonic means _____

Hypertonic means _____

Hypotonic means _____

16. Because cells are hypertonic in relation to fresh water, _____ produces a net movement of water into the cell. If that happens, the cell will become _____ and can even burst.
