

## Dirty water

- With adult help Naomi and Sanjiv have collected a sample of water from the local river.
- They are going to see how clean they can make the water by using a simple filter system.
- They have been provided with the materials but they are not sure in what order to place them in the plastic funnel.
- Label the diagram for them, placing the layers in the correct order.

plastic bottle	small stones
filter paper	cotton wool
sand	fine gravel
large funnel	clean water
