

Solving Systems of Linear Equations: Elimination Method
Jefferson Davis Learning Center, Sandra Peterson

Solve each system of linear equations by using the elimination method.		Answers
1.	$\begin{cases} x+2y=11 \\ -4x+6y=-2 \end{cases}$	1. (5, 3)
2.	$\begin{cases} 4x+3y=-3 \\ 7x+y=-1 \end{cases}$	2. (0, -1)
3.	$\begin{cases} 6x+5y=-8 \\ -2x-3y=-8 \end{cases}$	3. (2, -4)
4.	$\begin{cases} 2x+8y=12 \\ 7x-4y=14 \end{cases}$	4. (6, 0)
5.	$\begin{cases} 3x+5y=-6 \\ 5x+10y=-15 \end{cases}$	5. (3, -3)
6.	$\begin{cases} 2x+4y=10 \\ 7x+3y=13 \end{cases}$	6. (1, 2)
7.	$\begin{cases} 5x-2y=-14 \\ 3x+7y=8 \end{cases}$	7. (-2, 2)
8.	$\begin{cases} 5x-2y=-8 \\ 8x+3y=12 \end{cases}$	8. (0, 4)
