The sites listed below are available on the  $\underline{Rocks\ \&\ Minerals}$  page of the  $\underline{Kid\ Zone}$  at http://sciencespot.net/.

## Site #1: Rock Hounds

<ol> <li>Explore the Rock Creations area to complete each sect</li> </ol>
---

For thousands, even millions of years, little pieces of our earth have been eroded-						
broken down and worn away by and These little bits of our						
earth are washed downstream where they settle to the bottom of the,						
, and Layer after layer of earth is deposited on						
top of each. These layers are pressed down more and more through time, until the						
bottom layers slowly turn into						
Igneous rocks are called rocks and are formed either underground or						
above ground. Underground, they are formed when the melted rock, called,						
deep within the earth becomes trapped in small pockets. As these pockets of magma						
cool underground, the magma becomes igneous rocks. Igneous rocks are						
also formed when erupt, causing the magma to rise above the earth's						
surface. When magma appears above the earth, it is called Igneous rocks						
are formed as the lava cools above ground.						
Metamorphic rocks are rocks that have "" into another kind of						
rock. These rocks were once or rocks. How do						
sedimentary and igneous rocks change? The rocks are under tons and tons of						
, which fosters build up, and this causes them to change. If						
you examine metamorphic rock samples closely, you'll discover how flattened some of						
the in the rock are.						
2. Explore <u>Discovering Earth's Treasures</u> area to classify each rock. Use I for igneous, S for sedimenta and M for metamorphic.	ıry,					
Conglomerate Gneiss Granite Gypsum						
Limestone Obsidian Pumice Sandstone						
Schist Scoria Shale						
3. Try the Rock Hound Quiz. How did you do? ⊕ ⊕ ⊛
