

Reading Comprehension - Dinosaurs

Read each paragraph then cover the paragraph with another sheet of paper and answer the questions.

Diplodocus was one of the largest plant-eating dinosaurs to live on earth. Its name means "double beam". This dinosaur had a very long tail with seventy vertebrae, ten vertebrae in his back and fifteen in his neck. Diplodocus lived during the Late Jurassic period and fossils have been found in the U.S.

1. Diplodocus lived during the _____ period.
2. Diplodocus like to eat (circle one) meat, plants, people.
3. This dinosaur had (circle one) 10, 75, 70 vertebrae in his tail.

Pachycephalocaurus had a thick skull, probably with spines and knobs on it. They are thought to have used their heads in battle with enemies. These dinosaurs lived during the late cretaceous period and their bones have been found in North America. These dinosaurs may have traveled in herds with a male in-charge of the group.

1. Pachycephalocaurus lived during the _____ period.
2. Pachycephalocaurus had a nice, smooth head. (circle one) true false
3. A female dinosaur was probably in-charge of the herd. (circle one) true false

Tyrannosaurus the "tyrant lizard" was one of the largest meat-eating dinosaurs to live in the Cretaceous Period. He is thought to be a predator as well as a scavenger. Although Tyrannosaurus weighed up to 7 tons and measured approximately 40 feet from head to tail, he had very small arms. Scientist believe that these arms were used for balance when this animal was trying to get up. The 7 inch teeth of the Tyrannosaurus were definitely his major weapon!

1. Tyrannosaurus lived during the _____ period.
2. The name Tyrannosaurus means (circle one) thunder lizard, tyrant lizard.
3. Tyrannosaurus liked to eat (circle one) fruit, meat, bugs.

Look up the following words and write a short definition on the line.

carnivore _____
herbivore _____
tyrant _____
