

FOOD CHAINS, FOOD WEB, & ENERGY PYRAMID WEBQUEST

Begin this quest by going to the following website and reading the information provided:
<http://www.vtaide.com/png/foodchains.htm>

Once you have read through the web page, go back and click on the various sample food webs. Study them to familiarize yourself with who eats what. Next click on:

“Creating a possible food web”.

Use the organisms provided and create a food web. Note, a food web is made up of multiple food chains. Try to show organisms in more than just one role (1st level and 2nd level consumers). Do not forget to include the decomposer and scavenger! **Put your name where indicated before you print.** Return to previous page.

Next, click on the link on the bottom of the web page: **“Food Chains MCQ”**

This will open up a multiple choice quiz. The quiz is self checking. If you find you are missing many questions then you should go back to the web page and re-read the information again. You should paraphrase the questions and answers into your science notebook.

Next, click on: **Worksheets Menu,**

When the new page opens up find the link for **“Food Chains Crossword”**

Click on that link and follow the online directions.

Note: if you “cheat” it will show up as a different color. This crossword puzzle is self checking, so try to do your best. Once you have completed your crossword puzzle raise your hand so I can check you off.

If you finish early go back and create a different food web for a different biome.

Or you may start your homework: Energy Distribution Worksheet.
