

METRIC CONVERSIONS

Climb aboard the metric conversion train!

The metric conversion train is a tool that you can use to convert from one SI prefix to another.

Since m is a base unit, we start at the 'unit'. Locate the prefix you want to convert to, in this case the 'k'. Add up the numbers between 'unit' and 'k'. In this example it is 1 + 1 + 1 or 3. This will tell you how many spaces to move the decimal place. Since the 'k' is to the left of the 'unit', we move the decimal place 3 spaces to the left.

ex. $\begin{matrix} 1 & 1 & 1 \\ k & h & da & unit \end{matrix}$ 104.31 m = 0.10431 km

When converting from cubic (solids) to capacity (liquid) units, the following conversion is used:

1 cm³ = 1 mL e.g. 121 mL = 121 cm³ 1.932 cm³ = 1.932 mL

1. Complete the following conversions:

- a. 10 cm = 1 dm e. 34 cm = 340 mm
 b. 8 m = 8000 mm f. 168 mm = 0.168 m
 c. 24.98 m = 0.2498 hm g. 4.2 dam = 42000 mm
 c. 40 dam = 40000 cm h. 3 mm = 0.03 dm
 d. 98.6 m = 0.0986 km i. 1000 cm = 0.01 km

2. Complete the following conversions:

- a. 112.33 mg = 0.11233 g f. 53 ms = 0.053 s
 b. 0.0000345 kL = 0.345 dL g. 367.23 km = 367230 m
 c. 795 mg = 0.795 g h. 122.2 m = 0.1222 km
 d. 99889 mL = 998.89 dL i. 43 009 mL = 43 009 cm³
 e. 36.5 cm = 0.365 m j. 2256.3 cm³ = 2256.3 mL
