

Chemistry I  
Name \_\_\_\_\_

**Mass-Mole Conversion Handout**  
Date \_\_\_\_\_

Calculate the molecular mass for each of the following molecules:  
1. KOH                            2. N<sub>2</sub>O<sub>2</sub>                            3. Sr<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>

Convert each of the following from grams to moles:

4. 15.0 g C<sub>2</sub>H<sub>6</sub>                            5. 140.0 g NaOH

6. 27.2 g H<sub>2</sub>O                            7. 45.7 g CaCO<sub>3</sub>

Convert moles to grams in each of the following:

8. 1.5 moles NH<sub>3</sub>                            9. 0.65 moles H<sub>2</sub>SO<sub>4</sub>

Convert the following to moles:

10.  $3.01 \times 10^{23}$  atoms Na                            11.  $2.41 \times 10^{24}$  molecules CO<sub>2</sub>

Using Factor-Labeling, convert the following to atoms or molecules:

12. 2.56 moles Ca                            13. 0.75 moles AlCl<sub>3</sub>

Using Factor-Labeling, find the following:

14. The number of grams in  $1.25 \times 10^{25}$  molecules of aluminum oxide.

15. The number of molecules in 115 g nitrogen dioxide.
