

Measuring Area

Area is the space within a shape and is measured in square units. The formula to calculate area is:

$$\text{Area} = \text{Length (of object)} \times \text{Width (of object)}$$

What is the area of the following objects?

Using what you know about measurement, why do we use square units to measure area?

What is the formula to calculate the area of a parallelogram?

What is the area of the following objects?
