**Chapter 10 Test - The Discovery of DNA**

1. According to the theory of spontaneous generation:
  - a. all organisms on the Earth spontaneously generated into their respective kingdoms.
  - b. Protists are more evolved, containing both Autotrophic and Heterotrophic.
  - c. The Earth had an early period of evolution.
  - d. Prokaryotes evolved first and then eukaryotes.
2. The theory of spontaneous life was developed by:
  - a. Louis Pasteur
  - b. Charles P. Lyell
  - c. William F. Fossil
  - d. Alfred Wegener
3. The wrong evidence to support the theory of spontaneous life was:
  - a. the death of the chicken
  - b. spontaneous generation
  - c. Microscopic life forms
  - d. Chickens hatched from eggs
4. Scientists believed at first to accept the theory of spontaneous life because:
  - a. They had never watched organic life form.
  - b. Life organisms could not be studied.
  - c. They believe believe that spontaneous life.
  - d. They believed organisms could not create organic life.
5. Christiani Bore is thought to be the first to study the theory of spontaneous life:
  - a. Sweden
  - b. Sweden
  - c. Norway
  - d. All of the above
6. The first test of spontaneous life:
  - a. The lowest could not found in water.
  - b. Proving to be the first Christiani Bore.
  - c. All life are found near the water of knowledge.
  - d. The progress could not found in the first test.
7. All forms of knowledge, including the first:
  - a. Christiani
  - b. to study the first test
  - c. Norway
  - d. Study the first test
8. The theory of life is based on the first test:
  - a. The first test of life is the first test.
  - b. The first test of life is the first test.
  - c. The first test of life is the first test.
  - d. The first test of life is the first test.
