## SCIENTIFIC NOTATION IN OUTER SPACE!

### Mass of the Planets

| Planet  | Mass                  |
|---------|-----------------------|
| Mercury | $3.30 \times 10^{23}$ |
| Venus   | $4.87 \times 10^{24}$ |
| Earth   | $5.97 \times 10^{24}$ |
| Mars    | $6.42 \times 10^{23}$ |
| Jupiter | $1.90 \times 10^{27}$ |
| Saturn  | $5.69 \times 10^{26}$ |
| Uranus  | $8.68 \times 10^{26}$ |
| Neptune | $1.02 \times 10^{26}$ |

1. What is the mass of Earth in standard form?
2. What is the mass of Neptune in standard form?
3. Order the mass of Jupiter, Mars and Mercury in order from least to greatest.
4. The mass of the Sun is about  $1.99 \times 10^{30}$ . What is this number in standard form?
