

Worksheet: Solving for Area Problems

1. A rectangular garden has a length of 15 meters and a width of 8 meters. Calculate the area of the garden. How much soil is needed to cover the garden if the soil is 10 centimeters deep? How much soil is needed to cover the garden if the soil is 20 centimeters deep?

2. A square tile has a side length of 10 centimeters. Calculate the area of the tile. How much tile is needed to cover a square floor that is 2 meters by 2 meters? How much tile is needed to cover a square floor that is 3 meters by 3 meters?

3. A rectangular room has a length of 12 meters and a width of 6 meters. Calculate the area of the room. How much carpet is needed to cover the room if the carpet is 10 centimeters thick? How much carpet is needed to cover the room if the carpet is 20 centimeters thick?

4. A square tile has a side length of 10 centimeters. Calculate the area of the tile. How much tile is needed to cover a square floor that is 2 meters by 2 meters? How much tile is needed to cover a square floor that is 3 meters by 3 meters?

5. A rectangular garden has a length of 15 meters and a width of 8 meters. Calculate the area of the garden. How much soil is needed to cover the garden if the soil is 10 centimeters deep? How much soil is needed to cover the garden if the soil is 20 centimeters deep?
