

Try adding these amounts of money in pence.
Then write the total again in pounds.
I have done one for you.

Example $50p + 20p = 70p = £0.70$

1. $50p + 10p = \square = \square$

2. $30p + 40p = \square = \square$

3. $60p + 20p = \square = \square$

4. $35p + 25p = \square = \square$

5. $45p + 15p = \square = \square$

Remember to leave out the pence sign if you write the pounds sign.

These are a little bit harder!

6. $32p + 28p = \square = \square$

7. $43p + 17p = \square = \square$

8. $54p + 16p = \square = \square$

9. $56p + 12p = \square = \square$

10. $67p + 13p = \square = \square$

11. $48p + 23p = \square = \square$

12. $36p + 56p = \square = \square$

You may need to make some 'jottings' here to help with the adding up.
