

VOLUME OF CONE BY USING INTEGRATION:-

Let us consider a right circular cone of radius r and the height h . The volume of cone is obtained by the formula,

$$V = \int_a^b \pi y^2 dx$$

Here equation of the slant height i.e a straight line passing through origin is given by $y = mx$ and $m = dy/dx$ i.e $m = r/h$

Hence, $y = r x / h$.

$$V = \int_a^b \pi y^2 dx$$

$$V = \pi \int_0^h (rx/h)^2 dx$$

$$V = \pi r^2/h^2 \int_0^h x^2 dx$$

$$V = \pi r^2/h^2 \left[x^3 / 3 \right]_0^h$$

$$V = \pi r^2/h^2 \left[h^3 / 3 \right]$$

$$V = (1/3)\pi r^2 h \text{ cubic units.}$$
