

Set Theory Symbols and Definitions

Symbol	Name	Definition	Example
$\{ \}$	Set	A collection of elements	$A = \{2, 7, 8, 9, 15, 23, 35\}$
$A \cap B$	Intersection	Objects that belong to set A and set B	If set $A = \{1, 2, 3\}$ & set $B = \{2, 3, 4\}$ then $A \cap B = \{2, 3\}$
$A \cup B$	Union	Objects that belong to set A or set B	If set $A = \{1, 2, 3\}$ & set $B = \{4, 5, 6\}$ then $A \cup B = \{1, 2, 3, 4, 5, 6\}$
$A \subseteq B$	Subset	Set A is a subset of set B if and only if every element of set A is in set B.	If set $A = \{a, b, c\}$ & set $B = \{a, b, c\}$ then $A \subseteq B$.
$A \subset B$	Proper Subset	Set A is a proper subset of set B if and only if every element in set A is also in set B, and there exists at least one element in set B that is not in set A.	If set $A = \{a, b\}$ & set $B = \{a, b, c, d\}$ then $A \subset B$.
$A \not\subseteq B$	Not Subset	Subset A does not have any matching elements of set B.	If set $A = \{a, b\}$ & set $B = \{c, d, e, f\}$ then $A \not\subseteq B$.
$A \supseteq B$	Superset	Set A is a superset of set B if set A contains all of the elements of set B.	If set $A = \{d, e, f\}$ & set $B = \{d, e, f\}$ then $A \supseteq B$.
$A \supset B$	Proper Superset	Set A is a proper superset of set B if set A contains all of the elements of set B, and there exists at least one element in set A that is not in set B.	If set $A = \{4, 5, 6\}$ & set $B = \{5, 6\}$ then $A \supset B$.
$A \not\supseteq B$	Not Superset	Set A is not a superset of set B if set A does not contains all of the elements of set B.	If set $A = \{a, f, c, d\}$ & set $B = \{b, f\}$ then $A \not\supseteq B$.
$\mathcal{P}(A)$	Power Set	Power set is the set of all subsets of A, including the empty set and set A itself.	If set $A = \{1, 2, 3\}$ then $\mathcal{P}(A) = \{ \}, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{1, 2, 3\}$
$A = B$	Equality	Set A & set B contain the same elements.	If set $A = \{2, 3, 4\}$ & set $B = \{2, 3, 4\}$ then $A = B$.
