MINDFUL DIAGNOSIS

- I - Psychospiritual Problem as Perceived by Patient, Articulation of Personal Suffering
- II - Archetypal Shadow Attributes in Self-Inflicted Trauma Narrative
 - * Abused Child, Victim, Prostitute, Saboteur, Trickster/Addict
- III - Physical/Energetic Blockages
- IV - Factors Hindering Development of Right Mindfulness
 - * Inability to precisely experience and accept of present moment
 - * Self-attachment to traumatic narrative
 - * Lack of empathy, compassion, kindness for self and others
 - * Lack of meditation/cessation reduction skills
- V - Stages of Psychospiritual Development
 - 1 - Unaware of psychospiritual potential, excessive clinging and aversive attachments, both in phantasies
 - 2 - Discontent and aware of need for spirit growth but unformed, lacking resources, not yet motivated to actively seek change
 - 3 - Willing to study and attempt psychospiritual practice
 - 4 - Some meditation practice, moments of clarity in present moment, "aha" moments, reduced maladaptive thinking and behavior, less impulsivity and reactivity
 - 5 - Established daily spiritual discipline, ability to articulate insight into nature of impermanence, demonstrates empathy, compassion and acceptance toward all beings
