

Dividing Fractions by Whole Numbers

$$1/2 \div 6$$

Step 1: Draw a model to represent the first number (the fraction).

Step 2: Cut all of the parts of the model into pieces as determined by the second number (the whole number).

Step 3: Determine your answer by determining the size of each piece. Each piece is 1 out of 12 so $1/2 \div 6 = 1/12$
