

Name: _____

Food Chains

All living things need energy to survive. Plants rely on the soil, water, and sun for their energy. The plants in turn provide energy for some animals, while other animals eat those animals.

An example of one food chain is: grass → cow → man
Food chains can occur on land or in water.

Directions: Draw and label three different food chains. Try to increase each food chain by one organism. Write a short description of each.
