

 Name: _____

CCSS 2.NBT.6 Add up to four two-digit numbers using strategies based on place value and properties of operations.

Adding Up to 4-Two Digit Numbers

 Directions: Find the sums using place value and commutative property strategies.

Example:

$57 + 25 + 26 + 34 = \underline{\quad}$
<i>Break down into tens and ones.</i>
$50 + 7 + 20 + 5 + 20 + 6 + 30 + 4 = \underline{\quad}$
<i>Add tens together and ones together.</i>
$50 + 20 + 20 + 30 + (7 + 5 + 6 + 4) = \underline{\quad}$
$120 + (22) = \underline{\quad}$
<i>Break 22 into tens and ones.</i>
$120 + (20 + 2) = \underline{\quad}$
<i>Add the tens together and find the total sum.</i>
$140 + 2 = 142$

Now you try.

$36 + 22 + 44 + 38$

____ I double checked my work.
