GEOMETRY VOCABULARY

Match the vocabulary to the correct definition.

Special lines that intersect to form right angles.

Intersecting lines

A part of a line that has one endpoint and continues infinitely in one direction.

Parallel lines

Lines that cross each other and have one point in common.

Angle

Part of a line with two endpoints and includes all the points between those endpoints.

Point

A set of connected points continuing with no end in both directions.

Ray

An exact location in space represented by a dot with a capital letter.

Line

Lines that lie in the same plane and do not intersect.

Perpendicular lines

The endpoint that is shared in the angle.

Line Segment

Created by two rays that share one endpoint.

Vertex
