This work consists in part from finding out about regular and irregular shapes.
A regular shape has sides that are of equal length and contain all the same angle. Irregular shapes will have sides that aren't the same length and have different sized angles.

Look closely at the picture. Colour the shapes to match the key. Count the sides and corners carefully. Write down how many of each shape you have found.

Shape = Colour	How many did you find?	Shape = colour	How many did you find?
Triangle = red		Square = blue	
Rectangle = orange		Pentagon = green	
Hexagon = purple		Octagon = yellow	

Remember to colour both regular and irregular shapes
