

Name _____

All About Plants

The plant starts off as a seed and then grows into a seedling. A seedling is a very small plant like the one shown in the picture. Over time the seedling grows roots deep into the ground.

The roots take the ground water up the stem to the leaves. The three most important things a plant needs to live are: air, sunlight, and water.

1. What is this passage mainly about?

2. What is a seedling?

3. How does water get to the leaves?

4. What are the three most important things a plant needs?
