

THE TWENTIETH CENTURY

If there will be longer or shorter?

Scientists think that there won't be any noticeable method for lengthening life spans.

There will be more phones. If people will live the present they're talking about the phones.

If people will eat less meat because they're healthy. They will work from their houses. They will do the shopping from their houses and students will study from their houses.

If people will talk to other people all over the world using the computers. They won't need television because they'll watch films and TV programmes on their computers.

If cars will have an electronic computer connected to them and they accident and they won't have air pollution.

Robots will disappear everything will be brought by computers.

There will be different machines and they will be the effect of living from robots.

If many people will travel to other parts and other countries in the space. What do you think?

- a. Will there be more or the opposite?
- b. Will technology be an important thing in the world?
 - i. Will there be different countries?
 - ii. Will machines have a thinking for us?
 - iii. Will the Internet be done by robots?
- c. Will people live under the sea?
 - i. Will scientists try all different ways to make it?
 - ii. Will people travel from their countries?
