5. Give an example of abrasion Utah arches are sand plant by wind 450rd
6. When a student is shaking a container with rocks and vinegar to find out how much the rocks are weathered, what form of weathering is she using?
7. Explain why chemical weathering occurs faster in hot and wet climates rather than in cool dry ones.
Because molecules are in motion aroud
not chemicals & because water can
carry charrical dilivery to the surface
8. What does permeable mean? Hot water can pass through
9. The two most important factors in determining the rate at which weathering occurs are &
10. What gas can form carbonic acid when mixed with rain water to create Acid Rain? CO2+H2O = Carbon A'10x'de ov Corbon Roll 11. Which is probably the least common of all of the methods of weathering, and why?
animal, because Thousands of
animals would have to be doing
the same thing for a very long
12. What type of rock will fizz with Acid? Why?
organic rock because 4 has
carbon, carbon + Abid Creates
CO2. Cocent.
