

I think of the word I want to use. Synapses connect to a definition. (1) Logically, this correct definition should then be linked back to the word. (2) BUT, instead, the synapses seem to be unable to do that, and proceed to kick the definition back to the word, unable to make that tiny, final, necessary jump to give me the assurance that the word and definition I am thinking of are, in fact, correct. (3)
