

Understanding Motion & Forces

Newton's First Law:

An object at rest will remain at rest unless acted on by an unbalanced force. An object in motion continues in motion with the same speed and in the same direction unless acted upon by an unbalanced force.

This law is often called
"the Law of Inertia".

Newton's Second Law:

Acceleration is produced when a force acts on a mass. The greater the mass (of the object being accelerated) the greater the amount of force needed (to accelerate the object).

This means the heavier an object, the more force you need to move it.

Newton's Third Law:

For every action there is an equal and opposite reaction.

Basic Forces Relating to Motion

Gravity

attracts all objects
in the universe to
one another

Friction

when matter moves or
tries to move across or
through other matter

What causes falling objects to speed up as they fall? _____

What causes moving things to slow down? _____

Which law explains a ball bouncing off a wall? 1st 2nd 3rd

Which law explains that a soft ball and a bouncy ball hit with the same force will not go the same distance? 1st 2nd 3rd

Which law explains why you should wear your seat belt? 1st 2nd 3rd
