

*This is just to give you an idea. There is no "Mathematic formula" to writing.

TRIANGLE THEORY

Paragraph Questions – Look at your paragraph and answer the following questions. If something is not fulfilled, you need to ask your classmates what suggestions they may have for you. These are not just yes/no questions. If the answer is "no", then the paper needs work.

1. Is the topic sentence clear? (ONLY ONE SPECIFIC TOPIC!)
2. Is there support (primary and secondary)?
 - a. Is the primary support specific enough?
 - b. Is it clear or justified how the primary support relates to the topic (this is done by an explanation or illustration in the secondary support)?
3. Do the sentences flow together, or is it confusing to read? Are the details logically placed? Explain your answer, and give specific examples from the essay.
