

- Most \_\_\_\_\_ (usually \_\_\_\_\_) are \_\_\_\_\_ organisms.
- Some \_\_\_\_\_, including certain \_\_\_\_\_, use chemical \_\_\_\_\_ from \_\_\_\_\_ substances to make \_\_\_\_\_ compounds.
- \_\_\_\_\_ found near deep-sea \_\_\_\_\_ vents live in perpetual \_\_\_\_\_
  - \_\_\_\_\_ does not reach the bottom of the \_\_\_\_\_
- These \_\_\_\_\_ get \_\_\_\_\_ from \_\_\_\_\_ flowing out of the \_\_\_\_\_.

### Breaking Down Food for Energy

- The chemical \_\_\_\_\_ in organic \_\_\_\_\_ can be transferred to other \_\_\_\_\_ compounds or to \_\_\_\_\_ that consume \_\_\_\_\_
- \_\_\_\_\_ that must get \_\_\_\_\_ from \_\_\_\_\_ instead of directly from \_\_\_\_\_ or inorganic \_\_\_\_\_ are called \_\_\_\_\_
  - \_\_\_\_\_, including \_\_\_\_\_, get \_\_\_\_\_ from \_\_\_\_\_ through the process of \_\_\_\_\_
- \_\_\_\_\_ is a \_\_\_\_\_ process similar to burning \_\_\_\_\_
- While burning \_\_\_\_\_ almost all of the \_\_\_\_\_ in a fuel to \_\_\_\_\_ cellular \_\_\_\_\_ releases much of the energy in \_\_\_\_\_ to make \_\_\_\_\_
