More Punnett Square Practice		11.2

	_
READ	CPO Science

A punnett square helps scientists predict the possible genotypes and phenotypes of offspring when they know the genotypes of the parents. The phenotype is the physical appearance of an organism and the genotype is the inherited combination of alleles. This skill sheet will give you additional practice in using punnett squares to solve genetics problems.

In rabbits, black fur is dominant to white fur. If you cross a BB male with a Bb female, what are the possible genotypes and phenotypes of the offspring? What is the percent chance for each type?

Solution:

	В	В
В	ВВ	ВВ
b	Bb	Bb

Genotype	Phenotype	Chance
BB	Black fur	50%
Bb	Black fur	50%

PRACTICE	>-2
FRACTICE	

In cabbage butterflies, White wings are dominant to yellow wings. If a $\mathbf{W}\mathbf{w}$ butterfly is crossed with a $\mathbf{w}\mathbf{w}$ butterfly, what are the possible genotypes and phenotypes of the offspring and the percent chance for each?

	\mathbf{W}	w
w		
w		

Fill in the table:

Genotype	Phenotype	Chance
