

Plant shapes and sizes

Observations

There are many different types of plants. Trees have a woody trunk and grow very big. Some trees produce seeds in flowers while others produce seeds in cones. Shrubs are plants that have more than one trunk and often have flowers. Some plants are small with soft stems. They may have brightly colored flowers; scientists call these plants herbs.

Science activity

Which of the plants below are herbs, which are shrubs, and which are trees? Draw a line from each plant to the correct name. What do all the plants have in common?

herb

shrub

tree

Science exploration

Take a walk in your neighborhood. Are there more shrubs, herbs, or trees?
