

## Mean, Median or Mode

**Mean is the average:** To find the mean add all the numbers and divide by how many numbers there are.

Ex. 18, 15, 14, 9, 14

Add all numbers and divide by 5 because there are 5 numbers in the list.

**Mode is the number that occurs most in the list.**

Ex. 18, 15, 14, 9, 14

The mode would be 14 because it occurs more than any other number.

**Median: The number in the middle when you list the numbers from least to greatest.**

1. List the numbers from least to greatest.  
9, 14, 14, 15, 18
2. Find the middle number: 14 is the median.
