

QUESTION 1: THE FOLLOWING IS A PROBLEM STATEMENT:

Develop a program that calculates the area of a circle.

The program should prompt the user for the radius.

Assume the user enters:

5.0

The program should output the following:

Area: 78.5398

Write a program that calculates the area of a circle.

The program should prompt the user for the radius. Assume the user enters:

5.0

The program should output the following:

Area: 78.5398	78.5398
78.5398	78.5398
78.5398	78.5398
78.5398	78.5398
78.5398	78.5398
78.5398	78.5398

The program should output the following:

Area: 78.5398

Write a program that calculates the area of a circle.

Assume the user enters:

5.0

The program should output the following:

Area: 78.5398

Write a program that calculates the area of a circle.

The program should prompt the user for the radius.

Assume the user enters:

5.0

The program should output the following:

Area: 78.5398
