

So, What Do Earthworms Like to Eat?

Based on the knowledge you learned from the background sheet and based on the experiment what do earthworms like to eat? Why do you think they chose to eat those foods instead of the other foods in the other tubes?

Based on what the worms ate, we can classify them as_____.

- a. herbivores
- b. carnivores
- c. scavengers
- d. parasites

Based on our experimental observations, can we classify earthworms as decomposers also? Why do you think we can or can't classify them as decomposers?

We also classify organisms based on something called trophic levels. What level are earthworms classified in? Why are they classified in this level?

Observations
