

Area of Composite Figures

Directions: You must show your work by partitioning all such shapes into the regular shapes. Then find the individual areas before adding them to solve the total area and perimeter.

Find the area:

1.  Area = 20 m^2
Per = 20 m

2.  Area = 50 m^2
Per = 30 m

3.  Area = 60 m^2
Per = 30 m
