

Long Term Goals

- NIC:
 - global automated product as guidance to analyst and as initialization for PIPS
- DMI:
 - extend spatial range and improve accuracy of regional model
 - automatic ice edge detection from SAR using data fusion
- Norway:
 - to develop a high resolution (1 km) analysis and forecast system for the Svalbard area
- Canada:
 - to provide primarily automated analyses and forecasts over all operational areas, with requirement for minimal intervention from forecasters in high priority areas
