

THE PREDATOR SOURCE

The predator source is one of the three types of predators that affect the prey.

- **The Predator is External:** Predator-Behavior: "We like to hunt predators."
- Deploy your early warning system (active vision)
- Monitor your prey's prey (the behavior of your prey's prey can tell you what's coming)
- It is often easier to hunt down the prey than it is to hunt down the predators.
How to Respond:
- You have several ways to defend yourself or your prey from your predators but there are different strategies used depending on the type of predators.
■ **If the predator is Unpredicted:** Prey-behavior: "I'm going to surprise them!" Strategies for the Predator of Predators: use surprise to catch your prey.
■ **If the predator has been predicted:** Use the general defense strategies.

Predator-Prey Interaction:

Action	Motivation	Other Motivations
Stay away from predators	Protect our body from predators	Protect our body
Run away from predators	Protect our body from predators	Protect our body
Attack predators	"Predators" like attacking the weaker targets.	Attack Targets
Stay away from predators	The motivation of being predators	Stay Safe
