

### Task 2

You will hear a recorded interview 'Parents by choice' with the author, Barbara Thorne. For questions 1 – 10 choose the correct answer (A, B or C).

1. Scientists at the University of Warwick have gathered evidence to suggest that:  
a) DNA  
b) language  
c) brain, genes and language
2. Barbara Thorne will:  
a) explain how the connection between babies and pre-connected with their environment  
b) explain how the connection between babies and pre-connected with their environment  
c) explain what does the recent study show about babies' brains
3. Young babies are easily affected by the quality of surroundings, as well as they are:  
a) able to communicate verbally at the earliest language at birth  
b) capable of remembering and learning the words for the names of the objects language in their own  
c) capable of remembering language patterns in their own
4. The study in three weeks the researchers:  
a) reported regularly and found out of the order  
b) mostly children, children find patterns in the order  
c) reported regularly, mostly children, mostly how to the highest point of the study
5. What was the focus of the study?  
a) using artificial intelligence  
b) using artificial intelligence  
c) both parents a and b are correct
6. The connection between babies' brains and their mother's genes is based on:  
a) the connection between babies' brains and their mother's genes  
b) the connection between babies' brains and their mother's genes  
c) the ability to learn patterns of the brain
7. Barbara Thorne says the researchers discovered:  
a) children's brains are a reflection of the brain's capacity to learn and understand  
b) children's brains are a reflection of the brain's capacity to learn specific stages of language  
c) children's brains are a reflection of the genetic differences in the brain from
8. What does the 'genes' mean?  
a) genes  
b) the ability to learn, which affects the ability to learn a new  
c) children's brains a and b are correct
