

## What is a Perpendicular?

**Perpendicular** means at a 90 degree angle. Two lines that intersect at a 90 degree angle are perpendicular.

Perpendicular lines always intersect at a 90 degree angle. They are also called right angles. The symbol for a right angle is a small square at the vertex of the angle.

Perpendicular lines are also called orthogonal lines. This means they are at a 90 degree angle to each other. The word "orthogonal" comes from the Greek word "orthos" which means "right" or "correct".

Perpendicular lines always intersect at a 90 degree angle.

Perpendicular lines are also called orthogonal lines. This means they are at a 90 degree angle to each other. The word "orthogonal" comes from the Greek word "orthos" which means "right" or "correct".

Perpendicular lines always intersect at a 90 degree angle.

**What is a Perpendicular?** Perpendicular lines are lines that intersect at a 90 degree angle.

1. Perpendicular lines intersect at a 90 degree angle.
2. They are also called orthogonal lines.
3. Perpendicular lines always intersect at a 90 degree angle.
4. They are also called orthogonal lines.
5. Perpendicular lines intersect at a 90 degree angle.
6. They are also called orthogonal lines.
7. Perpendicular lines intersect at a 90 degree angle.
8. They are also called orthogonal lines.
