

FORENSIC SCIENCE

The place where crimes like theft, murder, and terrorist attacks take place is called the Once a serious crime has been reported, detectives head straight for the scene and seal it off to prevent anyone from removing or destroying any that may be there.

A detective's first job is to try to make sense of the crime scene and understand exactly what has happened. This isn't always as easy as it seems. Imagine being called to a house by a neighbour who has heard loud piercing screams. You discover smashed windows, scattered clothes and papers, and a outside who's trying to break in.

Handwriting practice area with a grey background and horizontal lines. The page is decorated with snowman illustrations. At the bottom, there are logos for 'five.com' and 'iSLCollect'.
