Multiplying any way

I reckon that it does not matter which way round you do multiplying sums because the answer will always be the same.

$$3 \times 2 = 6 \text{ and } 2 \times 3 = 6$$

Is this correct?

How many multiplication sums can you find that are the same either way round?

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐

☐ X ☐ = ☐ and ☐ X ☐ = ☐
